Shaping the Future of Automotive Safety

ELECTRONIC TYPE SPEED LIMITER

Electronic speed limiter is designed to automatically regulate a vehicle's speed by controlling the voltage of the electronic accelerator pedal. This system is only applicable to vehicles equipped with an electronic accelerator pedal.

FUEL TYPE SPEED LIMITER

Fuel speed limiter is designed to automatically regulate a vehicle's speed by controlling the fuel flow to the engine. This system is only applicable to vehicles equipped with mechanical accelerator pedal.

ADAPTIVE SPEED LIMITER

The Adaptive Speed Limiter by Resolute Dynamics automatically adjusts your speed to match road limits — ensuring safe, efficient, and compliant driving, even offline.

MULTI SPEED LIMITER

A geofence-based multi-speed limiter is designed to automatically regulate a vehicle's speed according to the defined speed limits set for specific geographic areas.

TERRAIN BASED DUAL SPEED LIMITER

The terrain-based dual speed limiter is designed to automatically regulate a vehicle's speed according to the road terrain, an accelerometer will detect the vibration of the terrain and switch the speed of vehicle in 2 preset maximum speed limit modes.

Capture. Connect. Control.

RPM REGULATOR

An RPM regulator is a specialized device used to control the RPM of a vehicle's engine when the Power Take-Off (PTO) switch is engaged. This functionality is essential for maintaining consistent engine performance and protecting both the engine and the equipment connected to the PTO.

AUTO ENGINE CUT-OFF

The Resolute Connect Auto Engine Cut-Off Unit is an intelligent safety device designed to automatically shut down a vehicle's engine after prolonged idling. It helps fleets reduce fuel wastage, prevent engine misuse, and promote disciplined driving, giving fleet managers greater control and measurable operational savings.

THERMOPRO

Designed to alert the driver and prevent engine overheat, oversee engine's operating temperature levels

TAIL SAFE

It is a rear end collision deterrent system which enables continuous flashing of brake light before normal operation

SMART LIFT MONITOR

Designed to track and record the number of operating cycles a workshop lift performs and oversee live data in our lift management platform.
